Introduction:

Simultaneous QUATRO-UNO is a Python implementation of a strategic card game where two players compete to outmaneuver each other. The game is designed with a graphical user interface (GUI) using the Tkinter library. It allows players to make selections, play the game, and view the results.

Game Rules:

- Each player receives four cards: "1", "2", "3", and "4".
- Players take turns revealing their leftmost card.
- The lower card is discarded, and the higher card remains.
- If both cards are identical, they are removed from play.
- Exception: If one card is a "1" and the other a "4", both cards are discarded.
- The player who empties their pile first loses the game.

Steps:

- ➢ Select your cards.
  - ○ The program window will display four buttons labeled with the card values "1", "2", "3", and "4". These buttons represent the cards available for you to choose from.
  - ○ Click on the buttons corresponding to the four cards you want to play in your secret selection.

- ➢ Game play.
  - ○ Upon clicking "Start Game," the program will perform the following actions:
  - ○ It will randomly select four cards from the available deck ("1", "2", "3", and "4") to represent the computer's secret selection.
  - ○ The program will reveal the computer's chosen cards on the screen.
- ➢ Game loop (automatic).
  - ○ The program will enter a loop that automatically resolves the round based on the chosen cards:
  - ○ The first card from your selection and the first card from the computer's selection will be compared.
  - ○ There are four possibilities:
  - ○ If your card has a lower value than the computer's card, the computer wins two cards from your pile.
  - ○ In the special case of "1" vs "4", both cards are removed from the piles
  - ○ The loop repeats, comparing the next cards from each pile until:
  - ○ One player's pile is empty (that player loses).
 - ○ Both players' piles are empty (a draw).

➢ Game Over.
  o Once the game loop determines a winner (or a draw), a message box will pop up on the screen. The message will indicate:
  o "Player wins" if you emptied the computer's pile first.
  o "Computer wins" if the computer emptied your pile first.
 o "DRAW" if both players' piles are empty
➢ Reset the game (optional).
  o The program window might provide a button labeled "Reset Game." Clicking this button will clear your previous selections and the computer's cards, allowing you to start a new round.
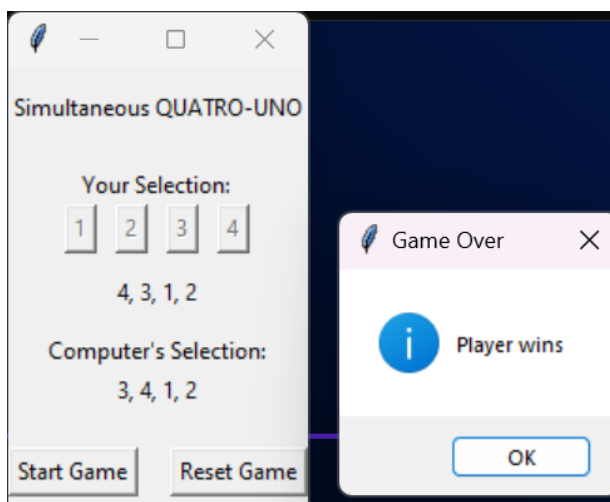

Screenshots for trying :
